**Profile color:** Anodized - RAL  
**Hardware color and material:** Black, plastic  
**Maximum panel width:** 1000 mm  
**Maximum panel height:** 4000 mm

A transparent glass wall is an excellent design solution for creating a terrace or a summer terrace. With its help, you can admire the excellent landscape or simply add elegance and lightness to the room and at the same time protect yourself from annoying external noise. The design does not have any transverse partitions or profiles. This means that nothing will stop you from enjoying the beautiful views. The system has the ability to fully open the opening. In just a couple of minutes, the Vizyon KCS frameless glazing system moves and significantly expands the passageway or gives access to fresh air.

Any artistic processing of glass is possible - tinting, matting, facet, engraving, applying matted images, applying full-color images, color photo printing. The assembly of sash profiles with glass is carried out by gluing with a special polyurethane adhesive for glass. In addition to high adhesion, the shape of the sash profiles is such that the cured adhesive forms a roller, making it impossible to remove (or fall out) the glass. Glue fixing eliminates the need to make holes in the glass. Roller carriages are equipped with reliable bearings and rollers protected from moisture and dirt. This allows the system to always move freely and silently. The system can be of any length. It is only important to take care of the reliability of the supporting structures to which the upper profile will be attached.

Estimated cost in finished form (euro) without VAT:  
 Installation (about 10-15% from total order cost),  
 Delivery (depends on order quantity and distance)  
 Shipping from Poland
